

Hospital Management System

Manual Testing – Test Summary Report

Test execution summary based on the supplied HMS test execution workbook

1. Executive Summary

Manual testing was performed across the Hospital Management System modules represented in the test execution workbook. A total of **324** executed test cases were identified: **150** Passed, **168** Failed, and **0** Blocked. Failed cases were documented for defect tracking and follow-up.

2. Overall Test Execution

Metric	Count
Total Test Cases	324
Passed	150
Failed	168
Blocked	0

3. Module-wise Execution Summary

Module	Total	Pass	Fail	Blocked
Login	22	13	9	0
Patient Dashboard	32	20	9	0
Receptionist	82	18	61	0
Nurse	30	15	15	0
Doctor	106	59	47	0
Lab Tech	19	7	12	0
Pharmacy	20	13	7	0
Billing	10	4	6	0
Admin	3	1	2	0

4. Defect Summary

The failed test cases resulted in **168** defect-related records in the dedicated bug report created from the workbook.

Severity Distribution

Severity	Count
Critical	1
High	16
Medium	71
Low	80

Priority Distribution

Priority	Count
High	69
Medium	99

5. Testing Activities

- Functional verification of application workflows and controls.
- Positive and negative validation of input fields.
- UI checks for alignment, sizing, labels, visibility and usability-related behavior.
- Smoke and regression-oriented checks for applicable modules.
- Defect documentation with expected and actual results, severity and priority.
- Retesting of applicable defects after fixes.

6. Test Deliverables

- HMS manual test execution workbook.
- HMS bug report.
- HMS test plan.
- Screenshots/evidence captured with relevant test records.
- This test summary report.

7. Conclusion

Testing results and identified defects are documented in the project test artifacts. Failed cases should be reviewed with the development team, corrected where applicable, and then retested followed by focused regression testing.
